## PRESS RELEASE

### **Cook Security Group releases innovative Cook Command Center, the ultimate online interface for customers.**

Cook Security Group's **Cook Command Center** provides customers access to view and manage all their equipment anytime, anywhere, on any device through one central, online location. The Cook Command Center utilizes big data to better budget, plan, increase efficiencies and drive revenue. We give financial institutions the option to outsource basic day to day management and free up valuable FTE to be redirected to more core business lines. Never has it been easier to access the following:

- Open and view service calls and preventive maintenance (PM) calls, past and present
- Access equipment details, model numbers, photos, site surveys (PM), software versions
- Track all projects, past and present, view and customize reports with analytics

Additional features in Cook Command Center include case management, remote software updates, hosting and maintaining video, surveillance and transaction integration, people tracking, marketing, cyber security, hard drive back up and much more.

**A SOC 2 Type II** report is available upon request. We recognize the importance of maintaining industry security standards and voluntarily perform annual audits to provide this report.

To test drive Cook Command Center email us at [info@cooksecuritygroup.com](mailto:info@cooksecuritygroup.com)
