

# WHAT IS SOTERIA?

Soteria is a service that facilitates the integration of 3rd party access control and alarm systems with Cook Security Group's Piko VMS and Cook Command Center Case Management.

On a configurable basis, any event that is created in access control or alarm system can be passed through to either Piko VMS, to Cook Command Center Case Management, or both. The types of access control and alarm events that are monitored, as well as the corresponding actions to take when a particular event occurs, are fully configurable.

SOTERIA

## Piko VMS Events

- Passing an event through to Piko VMS offers the ability to create a rich notification in Piko, with a detailed description of the event and a clickable link to the corresponding video (from one-to-many cameras). The corresponding video can also be automatically opened for the user, with an alert graphic in Piko when a particular type of event occurs. Users of the VMS client interface will automatically be alerted to selected events, on a configurable basis.

### Requirements & Dependencies

- **Soteria:**
  - .NET 4.6.2 or higher.
- **OnGuard (if using Access Control functionality):**
  - OnGuard version 7.6 required.
  - OnGuard OpenAccess must be configured and enabled in the OnGuard system.
  - OpenAccess license is required.
- **DMP (if using Alarm functionality):**
  - DMP Virtual Receiver.

## Command Center Events

- Passing an event through to Cook Command Center Case Management will create a case, for tracking purposes, with details of the event automatically populated. Additionally, video streams of the given event are automatically attached to the case for easy viewing and tracking, all in one easily accessible location.

v. DE5.10.20

Cook Security Group reserves the right to discontinue, or change at any time, specifications or designs without notice or without incurring obligations.
